SERVICE MANUAL

SERVO-CONTROLLED DIRECT DRIVE TURNTABLE

MODEL DP-80

Model DP-80

NIPPON COLUMBIA CO., LTD.

WARNING:

This Model DP-80 is designed to be operated on AC 100 Volts power supply. Therefore, this appliance must be connected to AC 100V output of a separated winding type

step-down transformer. The capacity of the step-down transformer should be 50 Volt-ampere or more.

If this is neglected, this appliance may fail to satisfy its specifications of both performance and SAFETY.

SAFETY PRECAUTIONS:

Always use an isolating step-down transformer as discribed above.

- Replace always with correct parts having correct rating, shape and material, etc. Especially the component with shading and ⚠ mark must be replaced only by the specified component for safety reasons.

- For setting up the record player;

- A) Do not damage the power cord by placing a heavy object on it, or by pinching it between angular objects. Do not fix the power cord by nails, etc. on wall.
- B) Make sure any metal object such as needle, hair pin or coin are not remaining inside the appliance.
- C) Give sufficient clearance for ventilation holes. Allow more than 10cm clearance between the rear of cabinet and wall.

EXPLODED VIEW OF MODEL DP-80

ADJUSTMENT

1. Adjustment of head gap

Loosen the two fixing screws and adjust the gap between the magnetic coating surface of turntable platter and the head surface to be approx. 0.2mm.

Note: Variation of this gap causes variation of stopping condition of the platter. Avoid adjustment of head position if it is not absolutely necessary.

2. Confirming regulator voltage

An IC is employed for regulating voltage, allowing no fine adjustment. Confirm this regulated voltage is 5V.

3. Adjustment of speed (KU-264)

3-1 Connect a dual trace oscilloscope to TP-1 on KU-264 P. W. board.

3-2 Set the phase lock button to NORMAL (locked) and obtain 45rpm rotation first.

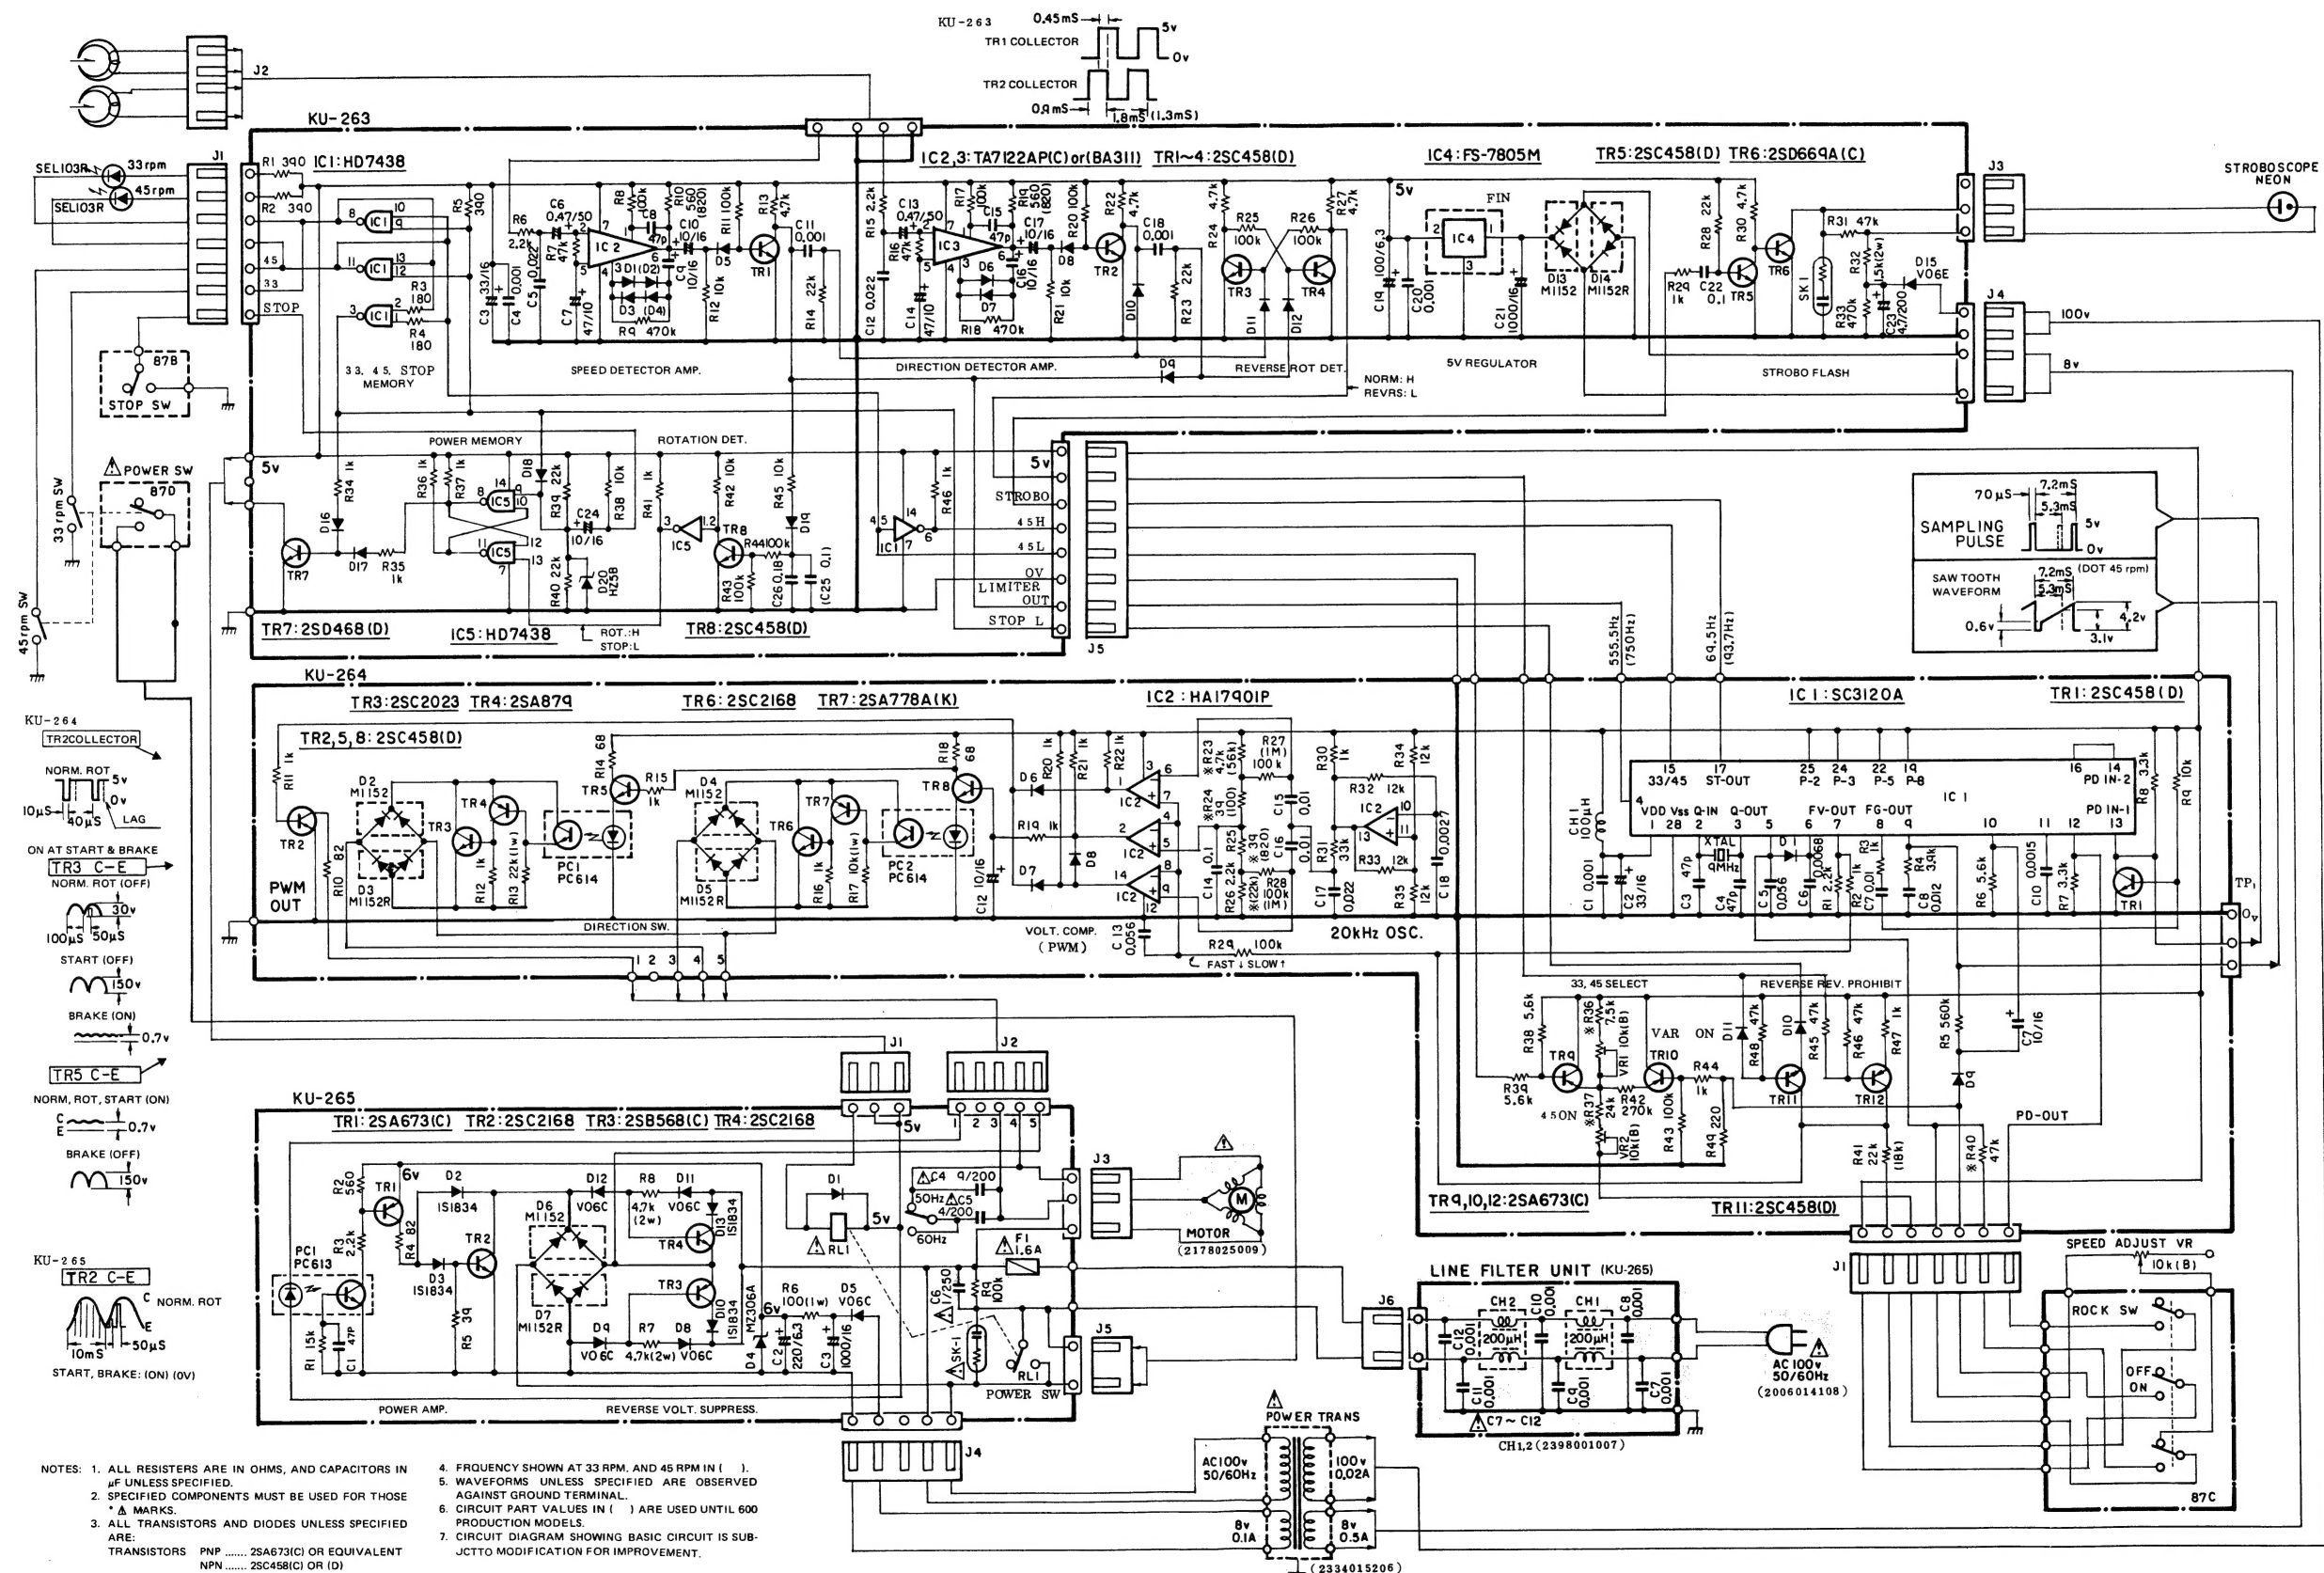

Adjust VR 2 so that the sampling pulse comes at 60% position from starting edge of the saw tooth waveform. (See below.)

3-3 Change over to 33rpm and adjust VR 1 to bring the pulse at 60% position in the same manner.

Note: If a single trace oscilloscope is used for adjustment, connect the ground terminal of the oscilloscope to the sampling waveform output of TP-1 instead of connecting to ground terminal thereof. Duplexed waveform can be observed.

SPECIFICATIONS

PHONO MOTOR

Drive system:	Direct drive by 3-phase AC servo motor
Speeds:	33-1/3 rpm and 45 rpm
Wow/flutter:	Less than 0.015% Wrms*
S/N ratio:	More than 77 dB (DIN-B)
Rise time:	Less than 1.2 sec. to reach 33-1/3 rpm.
Platter:	Casted aluminum alloy, 308 mm diam.
Speed adjustable range:	More than $\pm 6\%$ of nominal speeds (at variable)
Motor:	3-phase AC out-rotor type servo motor
Speed control system:	Speed servo control by frequency detection system combined with phase control system with reference to the quartz crystal oscillator, (Speed servo control only at variable speed mode)
Load influence:	0% (At out-most groove with stylus force of 250g)
Brake system:	Electronic brake
Speed deviation:	Less than 0.002%

GENERAL

Power supply:	AC 100V 50Hz/60Hz
Power consumption:	8W (At out-most groove with stylus force of 2.5g)
Dimensions:	376 diam. X 140(H)(mm)
Weight:	10Kg

* Measured by DENON's method using magnetic pulse wheel.

** Above specifications are subject to alteration without notice.
